Cloud Native Platform?

Cloud native technologies empower organizations to build and run **scalable applications** in **modern, dynamic environments** such as **public, private, and hybrid clouds**. Containers, service meshes, microservices, immutable infrastructure, and declarative APIs exemplify this approach.

These techniques enable **loosely coupled systems** that are **resilient, manageable, and observable**. Combined with robust **automation**, they allow engineers to make high-impact **changes frequently and predictably** with minimal toil.

Hi everyone

I am very sad to announce - officially - that Weaveworks will be closing its doors and shutting down commercial operations. Customers and partners will be working with a financial trustee whom we shall announce soon.

Founder & CEO

Weaveworks · Full-time

Jul 2014 - Dec 2023 · 9 yrs 6 mos

Weaveworks is where we invented GitOps and created FluxCD among many other tools. We provided commercial and open source solutions for managing Kubernetes applications. The largest companies and cloud providers in the world used our tech to deploy applications, accelerate CI/CD and manage fleets of Kubernetes clusters across multiple clouds, virtual, metal and edge environments.

The largest companies and cloud providers in the world used our tech to deploy applications, accelerate CI/CD and manage fleets of Kubernetes clusters across multiple clouds, virtual, metal and edge environments.

[Project ended] rkt is a pod-native container engine for Linux. It is composable, secure, and built on standards.

Rule of 👍:

Small company → Public
Enterprise → Hybrid

✌ People

How many people do “DevOps”?

~2-4... no matter the company size

- **Cloud & Cloud-Native Platforms** → (AWS/Azure/GCP)
- **Containerization & Orchestration** → (Docker, Kubernetes)
- **CI/CD & Automation Tools** → (Jenkins, GitLab CI, GitHub Actions)
- **Scripting & Programming Languages** → (Python, Go, Java, Bash, JavaScript, ..)
- **Infrastructure as Code (IaC)** → (Terraform, Pulumi, Ansible)
- **Monitoring & Observability** → (Prometheus, Grafana, ELK, Nagios, Splunk)
- **Incident & Reliability Engineering** → (SLAs/SLOs, error budgets, incident mgmt)
- **Version Control / GitOps**
- **Security / DevSecOps** → (shift-left practices, secure coding, SAST/DAST,..)
- **Operating Systems & Linux Administration**
- **Database & System Performance Tuning**
- **Soft Skills** → (communication, collaboration, problem-solving, project mgmt)
- **AI/ML Awareness** → (AI/ML integration, observability tools)

Know How is

~40 new projects
in one year

TL;DR

- Lots of new things, only a few big changes
- Use robust and trusted software
- IaC, Config As Code & GitOps – Everything else is just tools
- Invest in your engineers – there are few.
